

Sayandeep Saha

B.Tech CSE Graduate, 2026

B.Tech CSE graduate (2026 Batch) with strong foundations in Data Structures & Algorithms, OOPs, and full-stack development. Proficient in Java and Python with hands-on experience building scalable backend systems, desktop applications, and algorithm-driven projects. Adept at applying SDLC practices and collaborating via GitHub in team environments.

@ sayandeep.saha.official@gmail.com in sayandeep-saha EveningLantern +91 8902521309

SKILLS

- Java
- Python
- Data Structures & Algorithms
- OOP Concepts
- Node.js
- React
- Flutter
- SQL / DBMS
- REST APIs
- Git / GitHub
- Computer Networks
- HTML / CSS / JS

EDUCATION

- B.Tech CSE (CGPA – 7.77)**
Techno Int’l New Town 2022 – 2026
- Class 12 CBSE PCM (87%)**
Aditya Academy 2022
- Class 10 CBSE (91%)**
Aditya Academy 2020

PROJECTS & EXPERIENCE

VistaLex – PRAYAS 2k25 Hackathon, Team Lead (2025)

- **Problem:** Accessibility gap for differently-abled users in digital interfaces — needed a responsive, inclusive platform under a 24-hour constraint.
- **Approach & Solution:** Led a 4-member team using React; broke down features into parallelizable tasks, coordinated integration, and delivered a working product — secured 1st place among all competing teams.
- **Stack & Learning:** React, component-based architecture; strengthened my leadership, task delegation, and agile workflow skills under pressure.

Pathfinding Visualizer – Algorithm Visualization Tool, Java (2026)

- **Problem:** No intuitive tool to visually compare how graph traversal algorithms behave across different weighted terrains in real time.
- **Approach & Solution:** Built in Java (JavaFX, Maven) implementing BFS, DFS, Dijkstra’s, and A* with step-by-step animation; resolved a critical A* state corruption bug by redesigning gCost tracking to per-solve local arrays.
- **Stack & Learning:** Java, JavaFX, Maven; concept of graph traversal, heuristic search, algorithm optimization, and OOPs.

Software Development Intern – NexYug Tech (Jun – Jul 2024, Remote)

- **Problem:** Client needed a structured Windows desktop tool for spreadsheet-style data management with reliable validation logic.
- **Approach & Solution:** Developed and deployed a production-ready Windows desktop application using Flutter within a 45-day cycle with scalable UI workflows and input validation.
- **Stack & Learning:** Flutter, Dart; improved cross-platform UI development, data handling, and delivering production software within strict deadlines.

Village Health – Healthcare Management System (2026)

- **Problem:** Healthcare facilities lacked a unified system for managing patient data, role-based staff access, and real-time alerts.
- **Approach & Solution:** Architected a full-stack platform using Node.js, Express, and MongoDB; real-time notifications handling via Socket.io and multi-role authentication.
- **Stack & Learning:** Node.js, Express, MongoDB, significantly strengthened my backend architecture, DBMS schema design.

GrowGrid – Community Reporting Platform (2023)

- **Problem:** Local communities lacked a scalable mobile platform to report and track civic issues with real-time feedback.
- **Approach & Solution:** Built a cross-platform app using Flutter and Firebase with authentication, real-time database updates, and scalable state management.
- **Stack & Learning:** Flutter, Firebase; improved mobile development, real-time data synchronization.

ACHIEVEMENTS

- Winner – PRAYAS 2k25 Hackathon
- Winner – Intra College Debate Competition
- Winner – Intra College Coding Competition
